

THE HISTORY PROJECT

IOS PRODUCT DESIGN

7.1.14 - WORK IN PROGRESS

FLOW

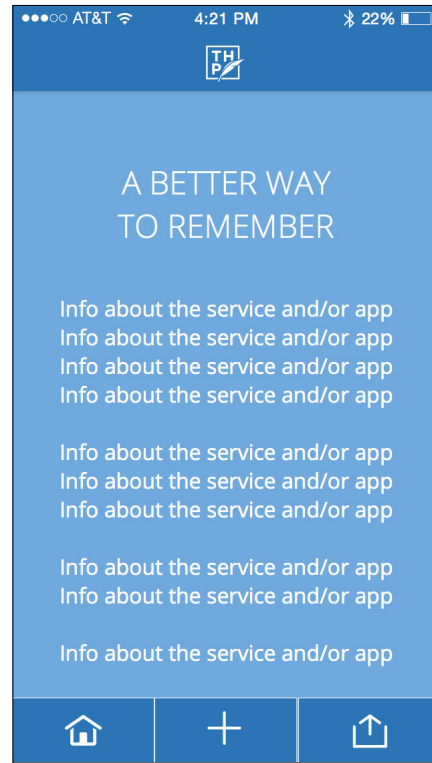

LANDING

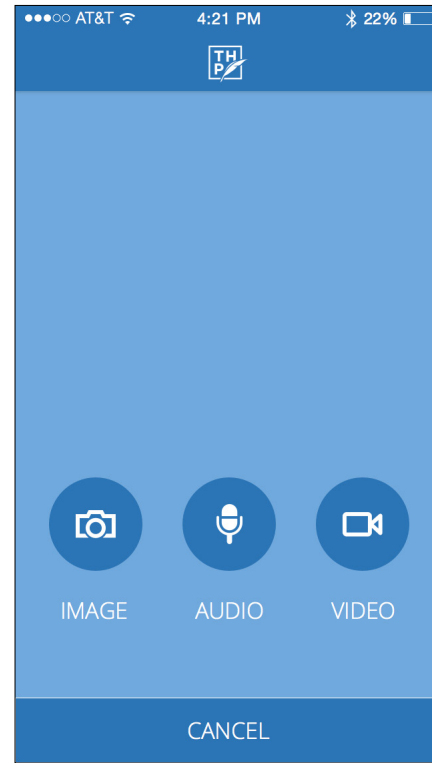

Launch:

- Image moves around slowly for a few seconds

Home:

- Base view provides info about THP and 3 CTA's: home and uploads are tabs that retain state, while the central CTA is a menu for collect

Menu:

- Similar to the Tumblr app, the capture sources are triggered by the central CTA. A memorable transition is used. This allows us to build in "import from photo album" or other sources in future versions.

IMAGE CAPTURE

- In camera mode, users can:
- Adjust flash setting
 - Flip to front camera
 - Return to base view
 - Take a picture
 - Flip to video mode

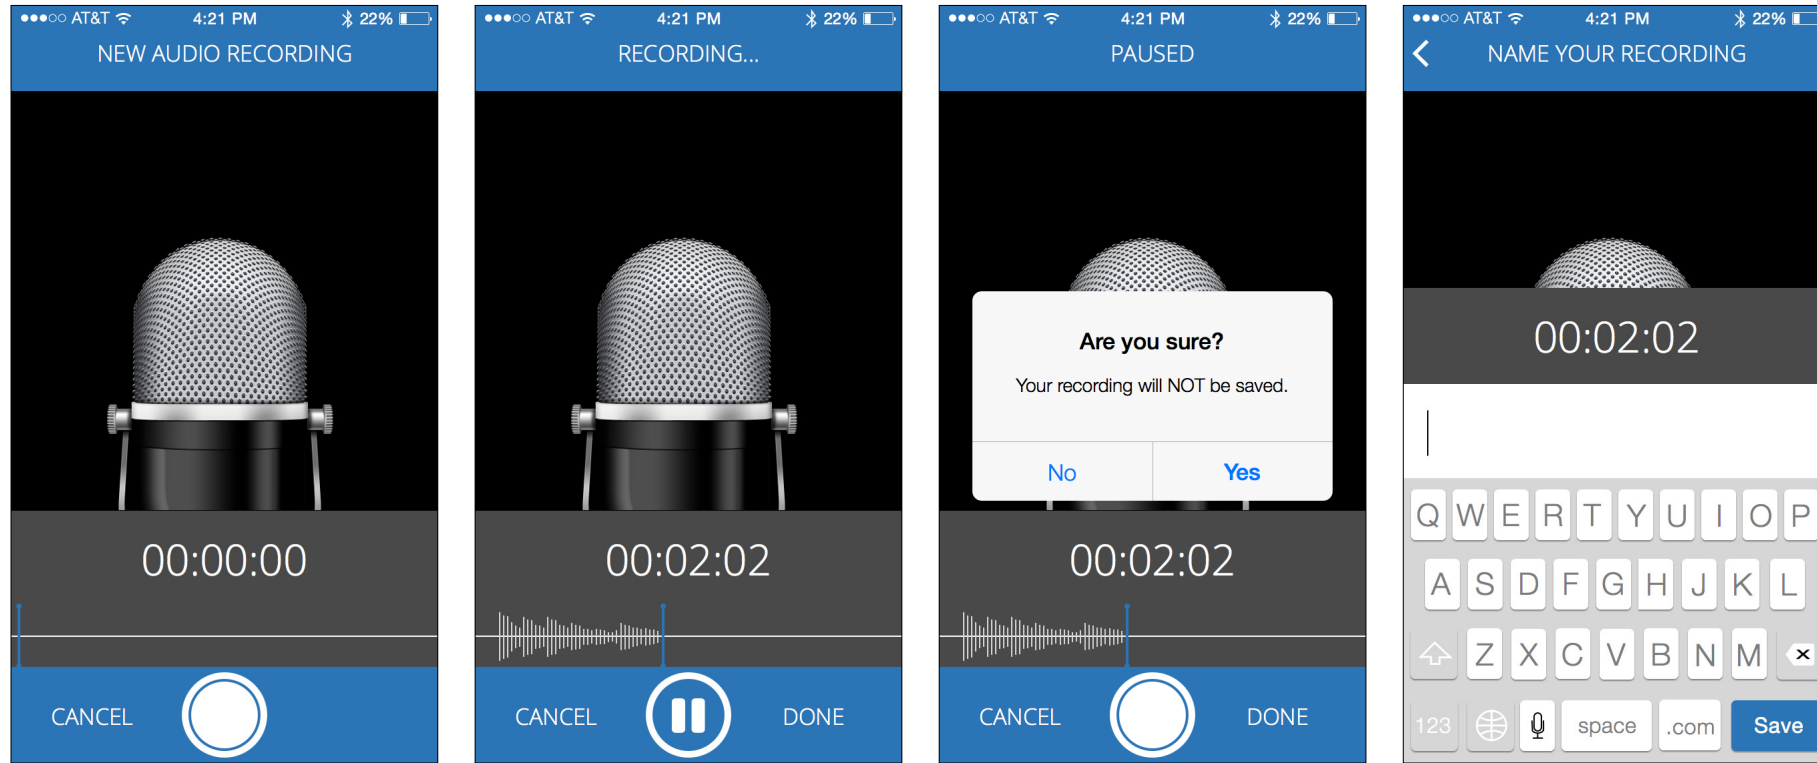

Landscape view is available for image capture as well.

Image review allows users to retake a photo or save.

AUDIO CAPTURE

In audio mode, users can:

- Return to base view
- Begin recording

Upon hitting record, users:

- Label, timer, and waveform update
- Can cancel
- Can pause
- Can complete

Canceling after a recording begins requires confirmation.

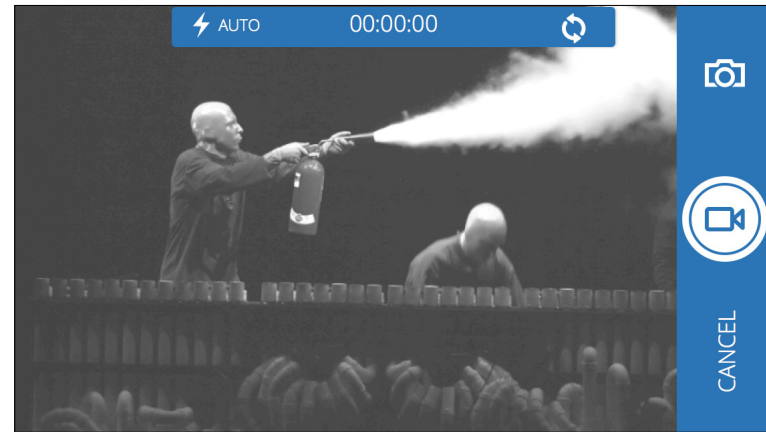

- Upon tapping done, users can name their recording
- Tapping back returns to the paused recording

VIDEO CAPTURE

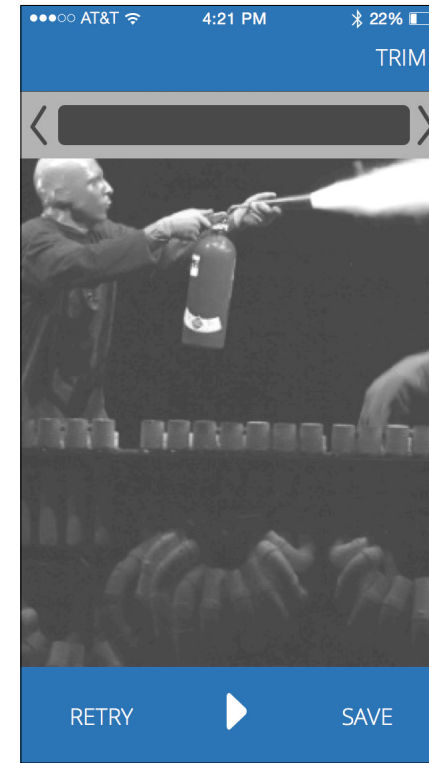

In camera mode, users can:

- Adjust flash setting
- Flip to front camera
- Return to base view
- Record a video
- Flip to camera mode

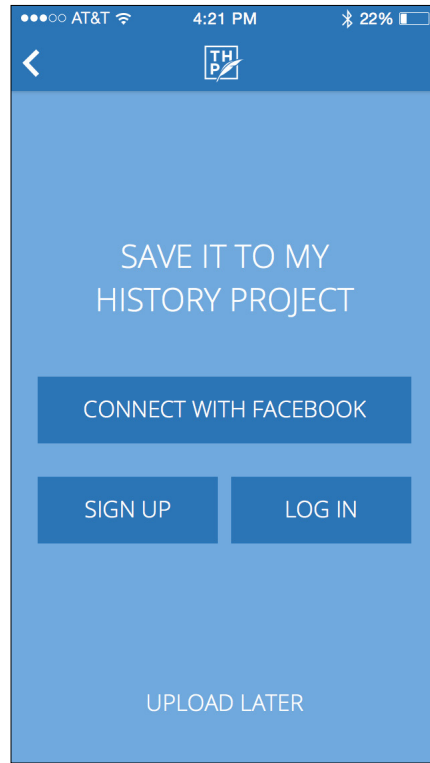

Landscape view is available for video capture as well.

In video review mode, users can:

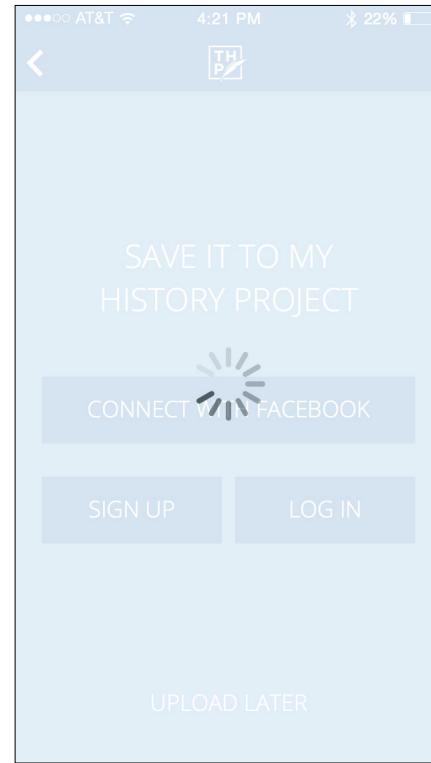

- Retry (restart recording)
- Play
- Trim, and Save the video

SAVE WALL

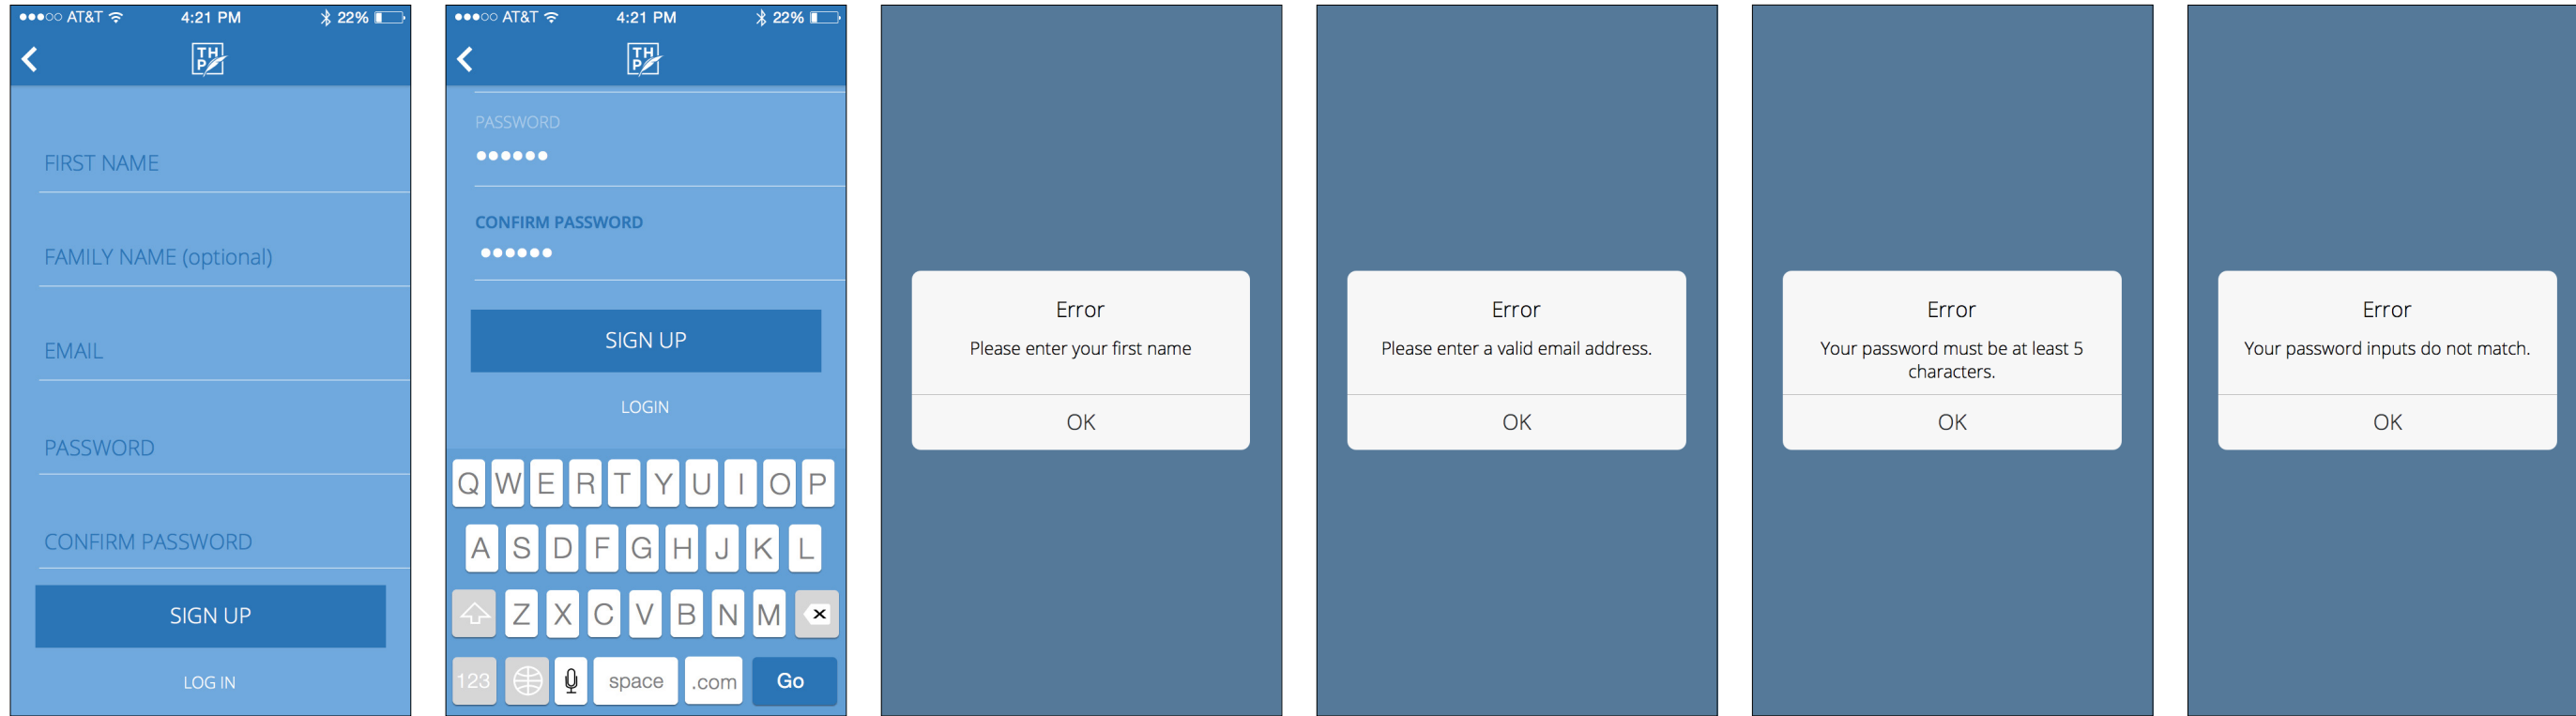

If a users is not logged in already, s/he can:

- Connect with FB
- Sign Up
- Login via email
- Leave in uploads tab (tapping drops user into this tab)

The FB auth process...

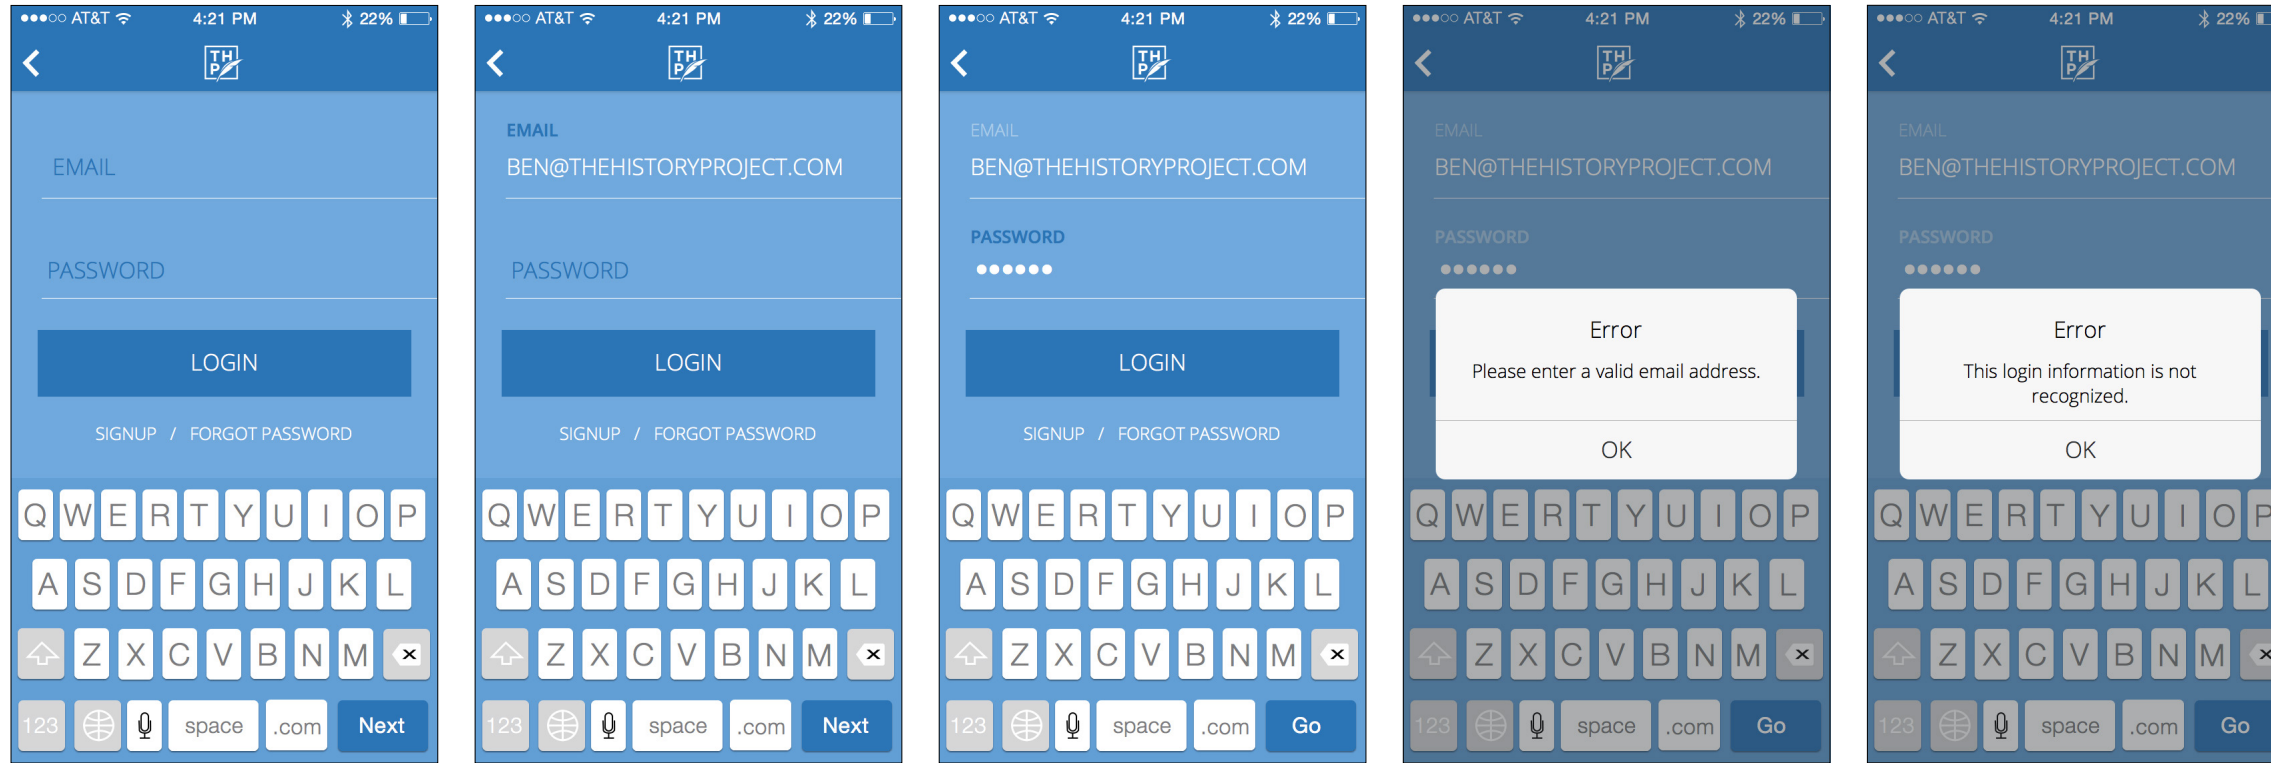

SIGN UP

The Sign up form includes:

- First
- Family (optional)
- Email
- Password
- Potentially add a confirmation field given the greater likelihood of typos. There are pros and cons for email confirmation and/or password confirmation.

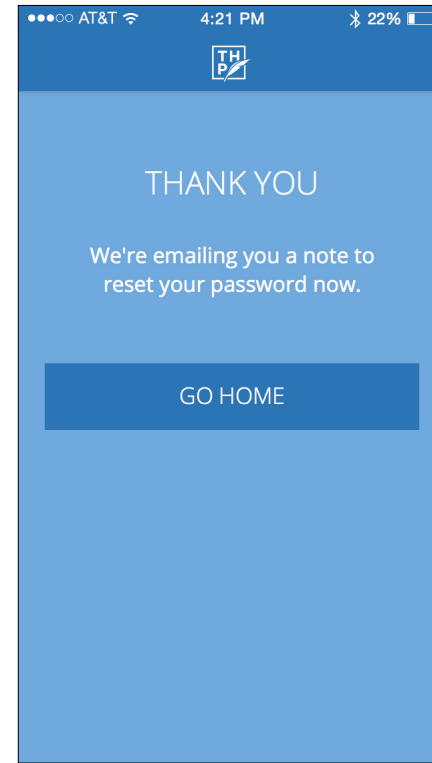

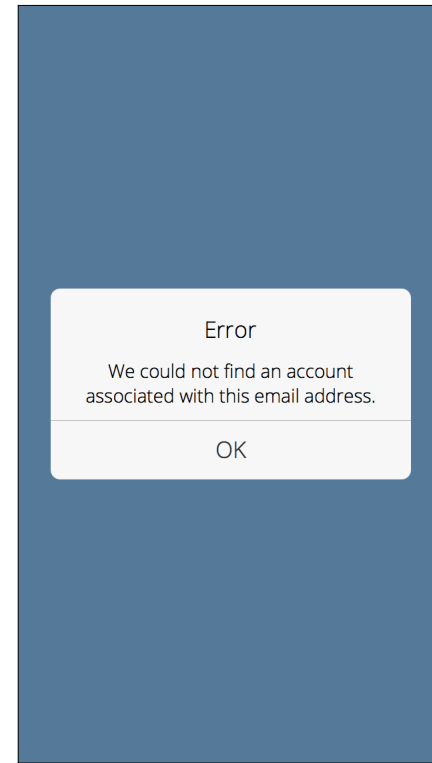

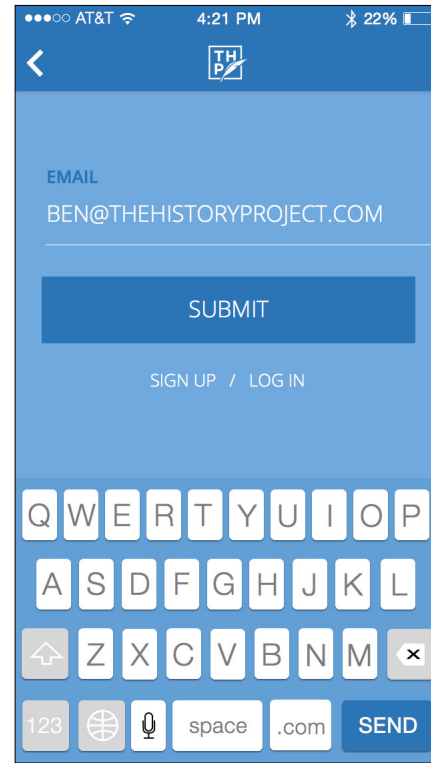

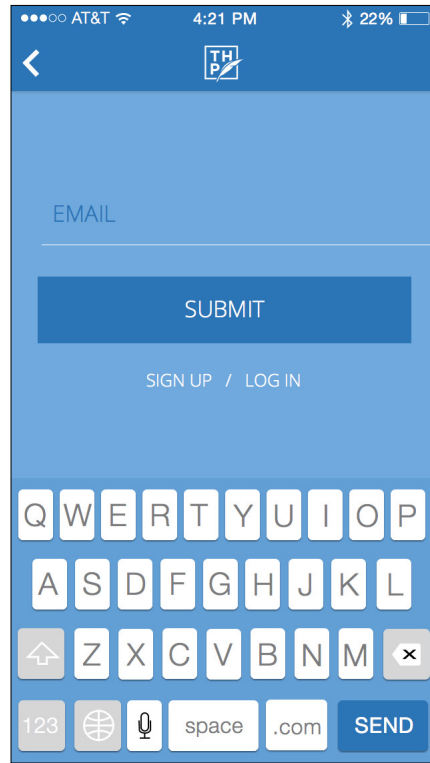

LOG IN

The Log In form includes:

- Email
- Password

FORGOT PASSWORD

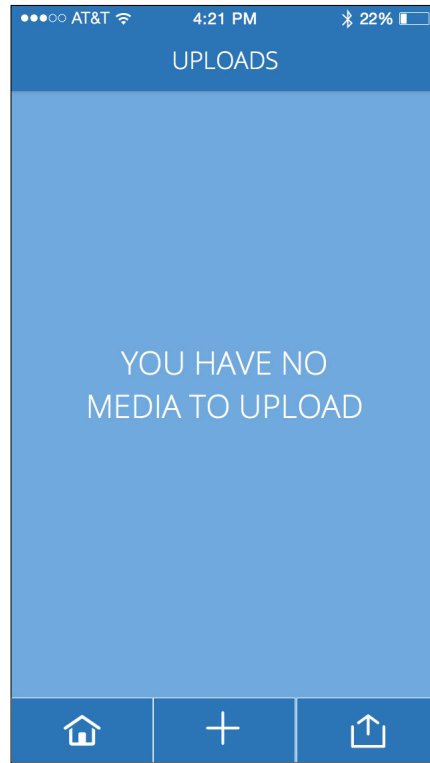

The Forgot password form includes:

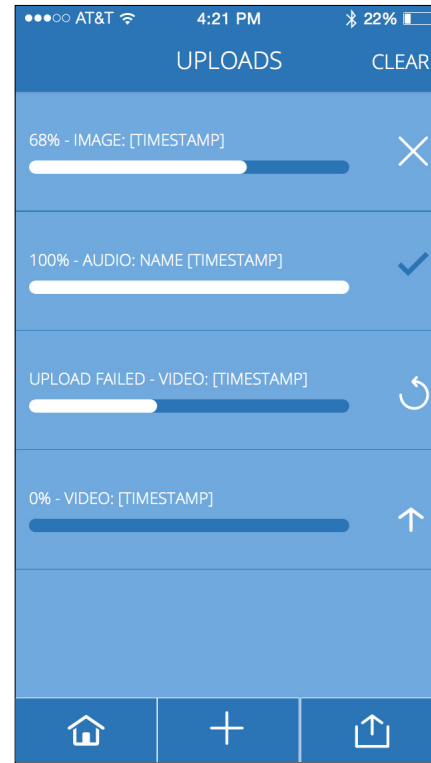

- Email

The email triggered with a link takes users to ".com"

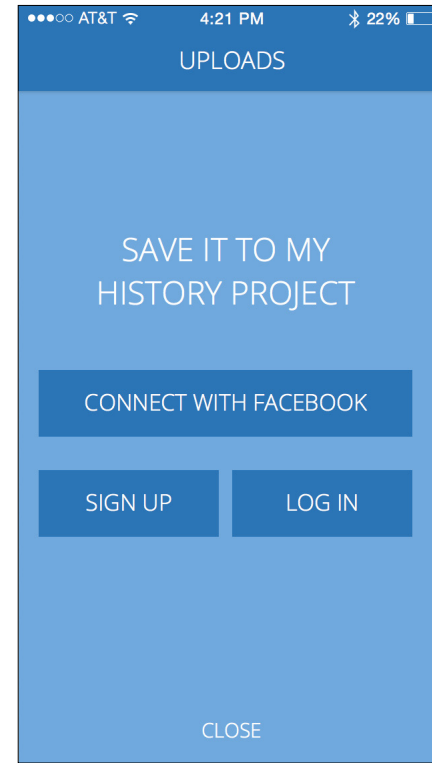

UPLOADS

When no media has been captured, and when all uploads are completed and/or cleared, a simple message fills the uploads view.

When logged in, the uploads view is triggered immediately after tapping save from any of the capture tools (source views).

If not logged in, and a user has captured media that has not yet been synced, the uploads view provides a prompt to connect to THP.

NOTE: Media is saved to a user's media gallery on the server instead of a particular project. This will allow for proper curation and a more minimal v1 mobile app.
